Search for yourself on the web of data!

http://sig.ma/

Sig.ma is a new search interface for exploring the web of data. Starting with a keyword, the indexes of Sindice, Yahoo and OKKAM are searched for matching RDFa- or microformat-annotated web pages and Linked Data sites. Results are presented in a view that features (i) optimistic aggregation into a single entity profile, (ii) powerful source management that allows users to see the provenance of each piece of data and to add and remove individual sources, and (ii) pragmatic property and value consolidation to reduce redundancy and information noise. Cleaned-up Sig.ma profiles can be embedded into web pages.

**Why use Sig.ma?**

1. Search and browse the emerging Web of Data
2. Embed an entity profile into your web pages
3. Use the Sigma API for search and consolidation in your own application
4. Coming soon: Subscribe to receive notifications about changes to a profile

Funded by Science Foundation Ireland under Grant No. SFI/08/CE/I1380 (Lion-2) and by the FP7 EU Large-scale Integrating Project OKKAM - Enabling a Web of Entities (contract no. ICT-215032).
